

NGUYỄN KHÁNH ĐAN

Industrial Designer

ABOUT ME

As a recent graduate of Industrial Design from Van Lang University, I am applying for the position of Industrial Designer to gain practical experience and develop my creative abilities.

My future goal is to perfect a unique design style that reflects my own vision.

I approach each project as an opportunity to achieve harmony between aesthetics and practical application, creating designs that are both purposeful and artistic.

My achievements after 4 years: besides discipline and perseverance, I have the ability to identify and overcome the limitations of today's products, improving them to make them more advanced,

3 words I love: test - learn - fix

ACTIVITIES

Participating in the SEE + Design Fair 2023 was the "Bent.ch" chair designed by me personally. The exhibition was organized by C.space Design Complex. This exhibition was the first collaboration between C.space Design Complex and Van Lang University with the theme "multi-layers"
