ABOUT ME

INDUSTRIAL DESIGNER

PRODUCT STORYTELLER

DIEN BIEN PHU STREET,
TAN DINH WARD,
DISTRICT 1

MADE BY
NGUYỄN KHÁNH ĐAN
23 YEARS OLD

WHO AM I?

HELLO! I'M AN INDUSTRIAL DESIGNER
WHO BELIEVES EVERY USER NEED IS
WORTH DISCOVERING.

WITH STRONG PRODUCT ANALYSIS,
AN HONEST RESEARCH APPROACH,
AND A FOCUS ON REFINING
DESIGN, I TRANSFORM IDEAS INTO
PRODUCTS THAT ARE USEFUL,
INNOVATIVE, RELEVANT, AND
COMPELLING IN TODAY'S
TECHNOLOGY-DRIVEN WORLD.

FORTI HALO

"Only 38% of American workers are satisfied with their ability to focus at work."
(Gensler, 2016).

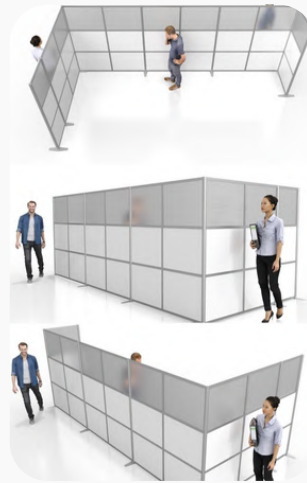

"People feel distracted when others move and walk around them."
(Bell et al., 2001).

"53% of employees report being interrupted by others while trying to concentrate."

(P6)

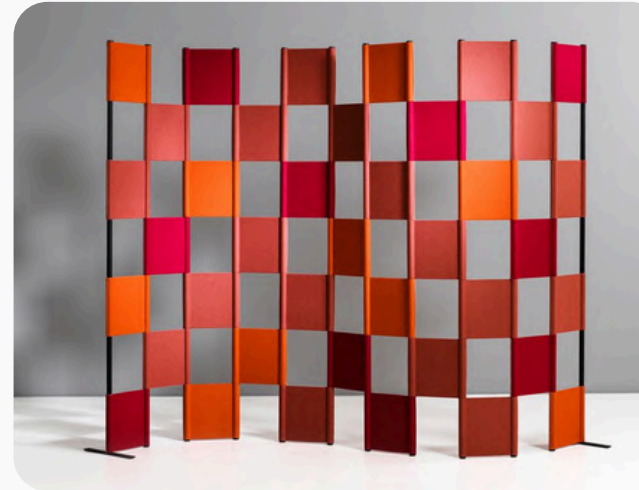

MARKET ISSUES:

- Most partitions are fixed in position.
- Partitions lack flexibility in transportation.
- Partitions offer limited functionality, with minimal need for frequent interaction (except in office/workplace environments, where functionality tends to be more developed).

CUSTOMER INSIGHTS:

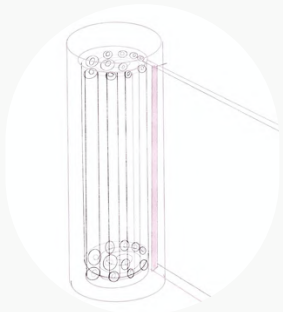

- A sense of confinement when users cannot adjust the shielding direction to suit their individual needs.
- Discomfort when certain areas cannot be properly covered (e.g., face, or the lower body when wearing short skirts for women).

- Space-consuming
- Stuffy
- Lack of lighting

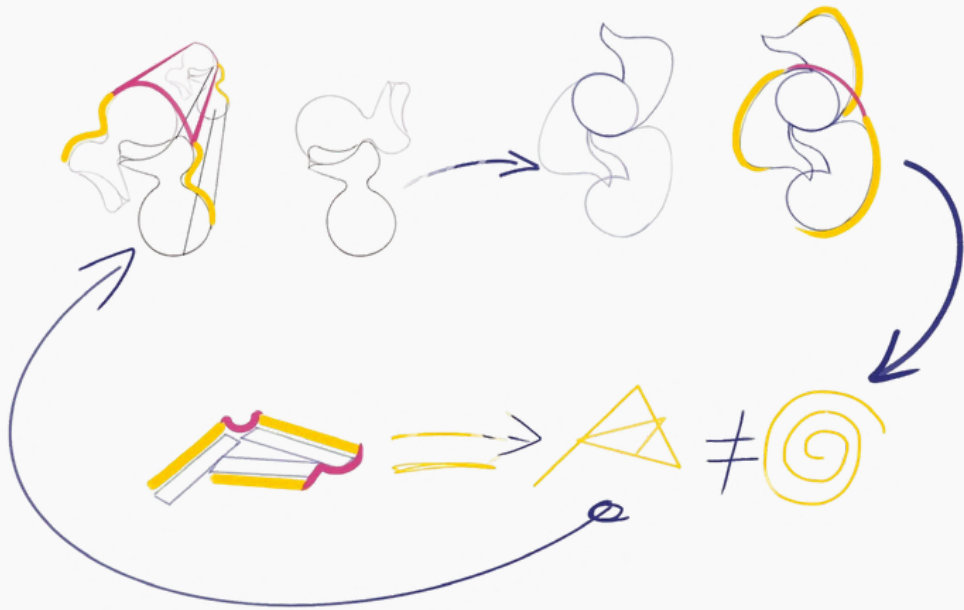

EXPERIMENTAL STRUCTURAL: MANUAL

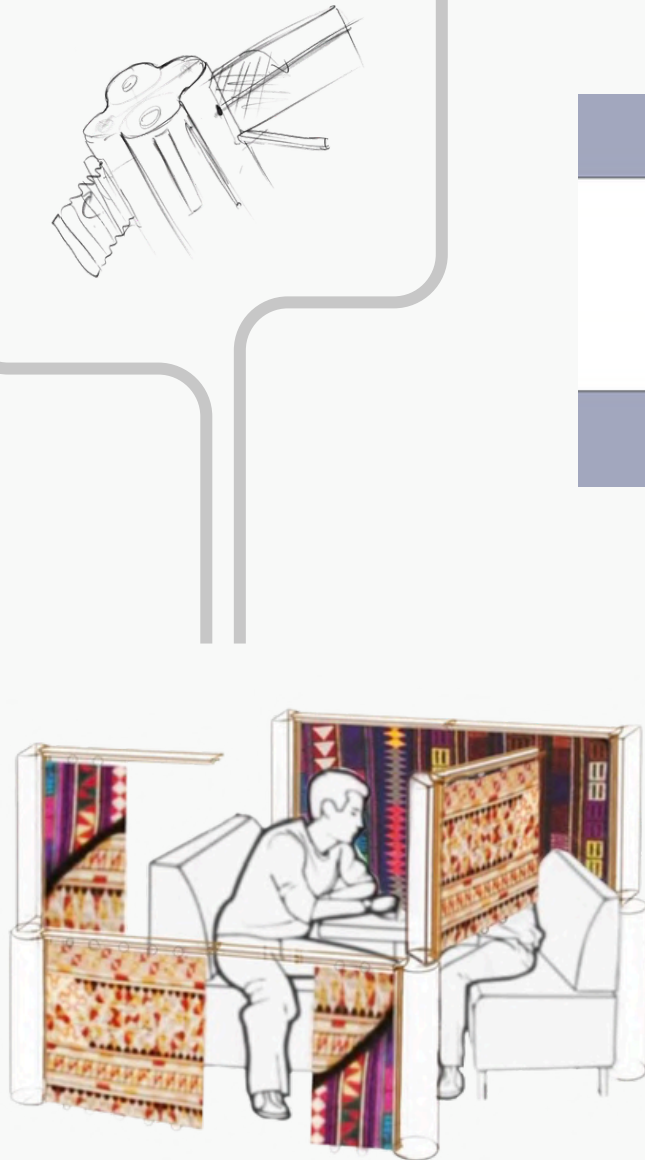

RIB-FRAME STRUCTURE

Yellow indicates the fixed attachment points where the fabric/silk/woven fibers are secured to the bamboo/wood/plastic ribs. Pink indicates the areas where the fabric/silk/woven fibers are stretched or relaxed.

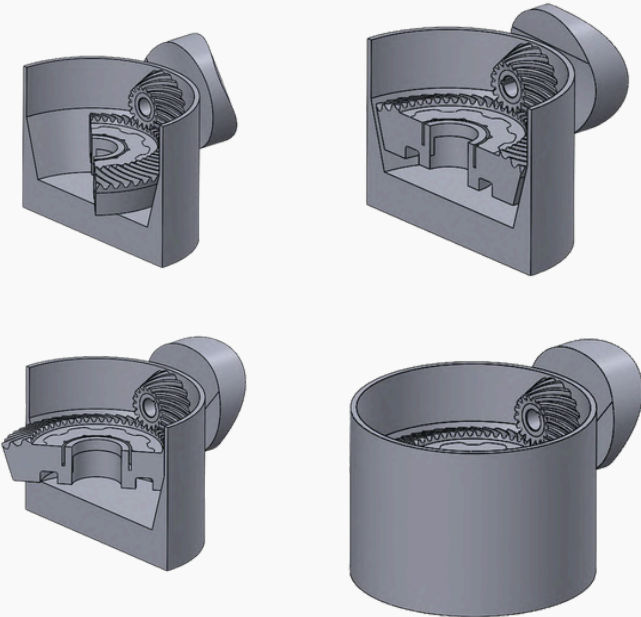

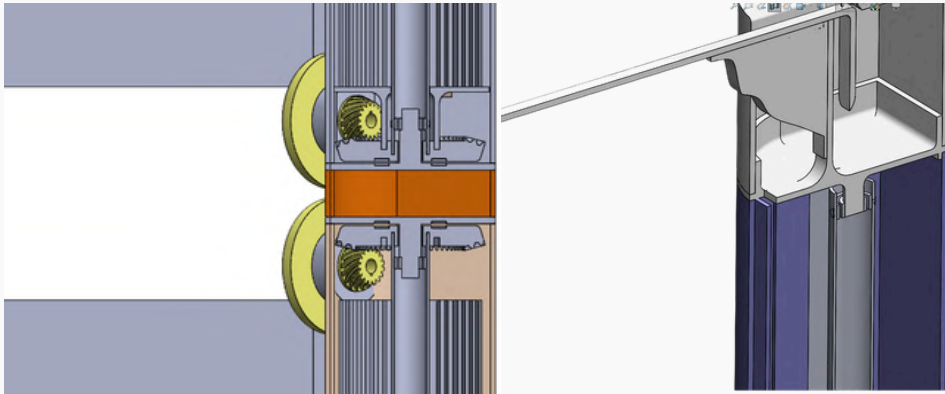

Each rib (including fabric): 4 mm thick.

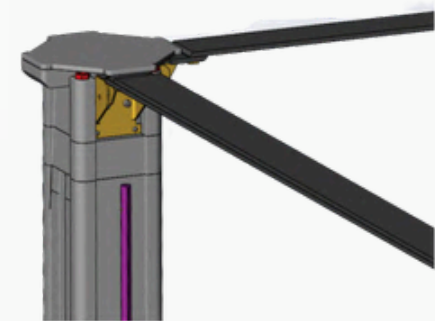

GEAR KNOB MECHANISM

Manually rotate to extend or retract the curtain length.

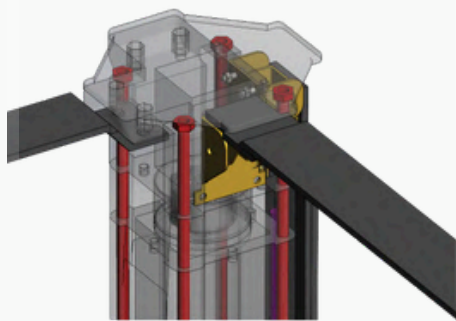

FULLY INTEGRATED STRUCTURE: AUTOMATIC

BRACING BAR

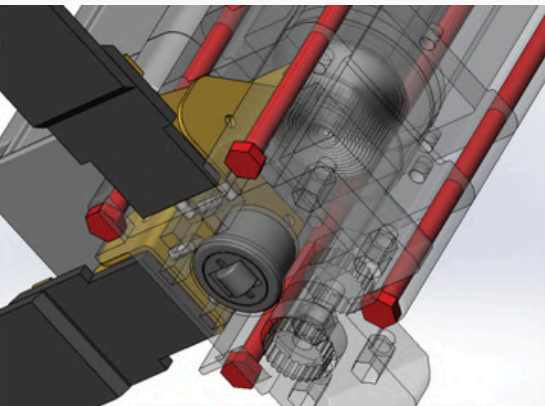

The bracing system on this column is connected and secured to the joint system of other columns, forming a stable supporting frame.

THROUGH-COLUMN BEAM SYSTEM

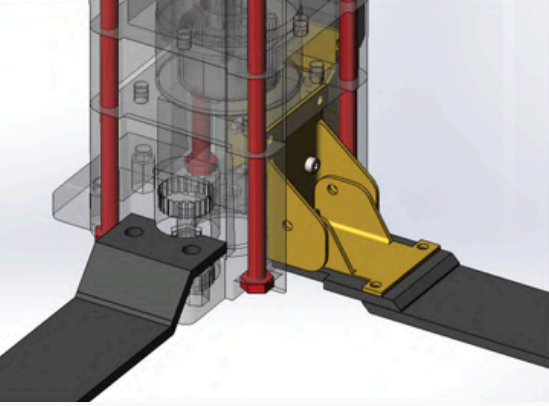

Each column requires four stainless steel beams to reinforce the structural strength of the entire frame. The column is 2 meters high and functions as a support frame, impact-resistant structure, and load-bearing element for the spring-driven curtain tension.

INTERNAL PARTS

WHEELS

Enable easy movement of the partition system with minimal effort.

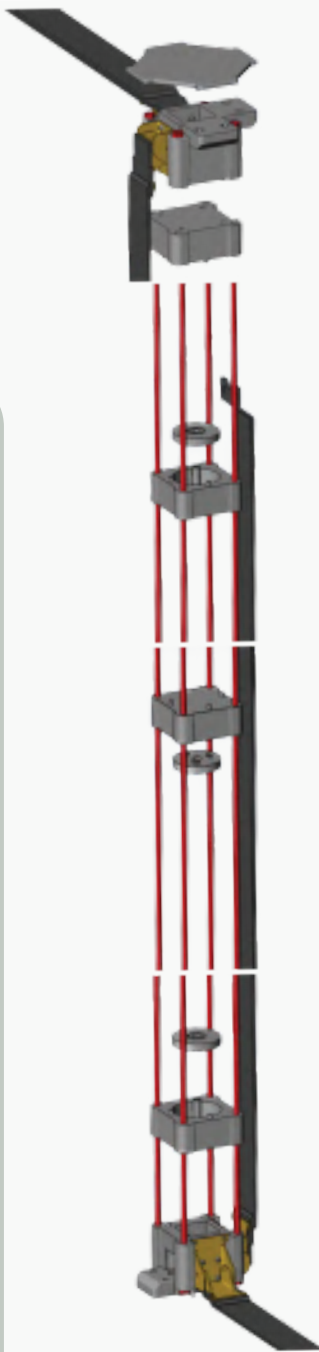

ADJUSTABLE FEET

Allow each column to be raised or lowered on uneven surfaces, helping the structure maintain stability and balance. This feature is essential in complex terrains.

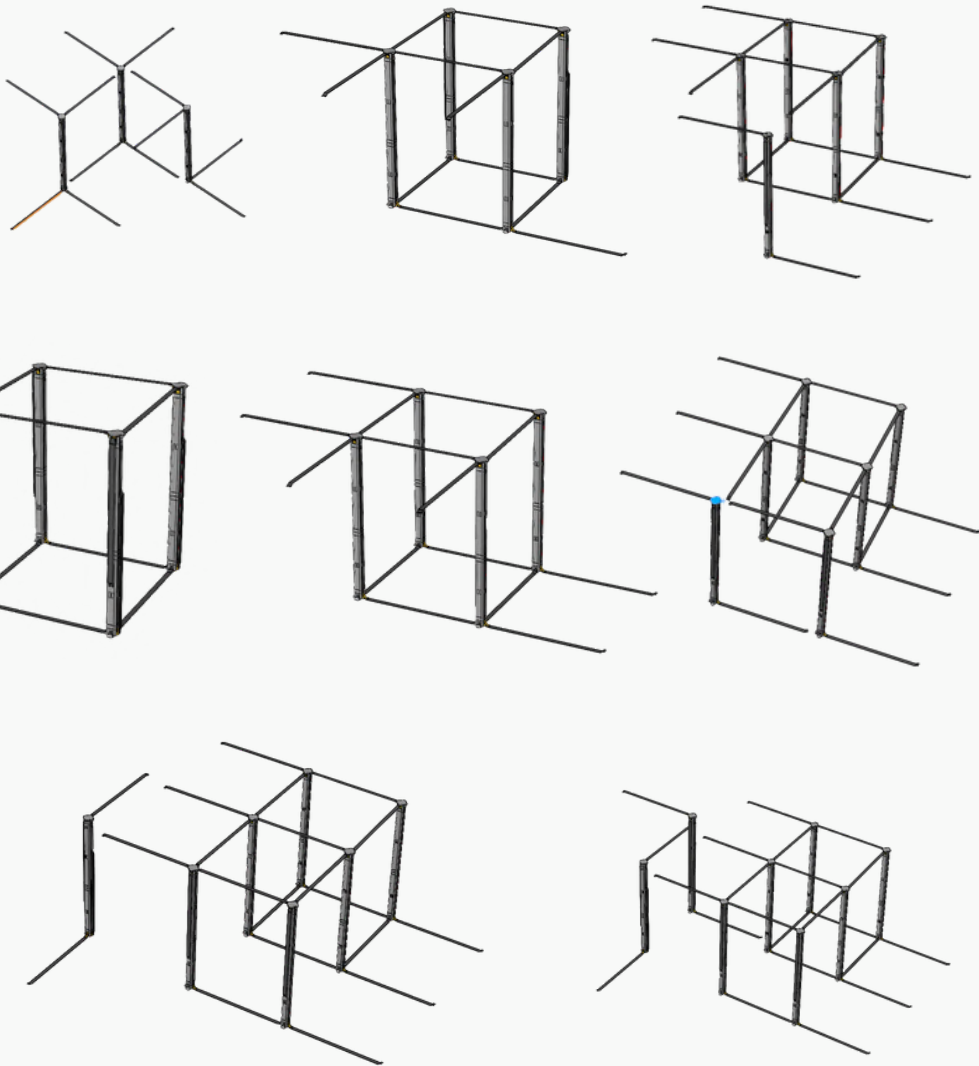

90-DEGREE FOLDING HINGE

Connection between the bracing bar and the column. Press the button to deploy the bracing bar. Press the button to retract the bracing bar

FORTI HALO'S SPATIAL CONNECTIVITY AND EXPANDABILITY

(Frosted matte flexible PVC curtain)
